

Appendix 6 – Boot cover sample collection

Boot cover/shoe cover samples can be collected by walking around inside the shed. After walking inside the shed with the disposable shoe cover, place the boot covers in a sterile sealable bag. Label the bag with a permanent marker and transport the sample to the lab on ice.

Figure 9. Boot cover sampling. To put the boot covers and shoe covers on, (1) dip your boots in the boot dip; (2) place the plastic boot covers over the boots before entering the shed; (3) wear the disposable shoe cover over the plastic boot cover.
